DETAILED ACTION

1. Claims 1, 3-11, 13-25, and 29-31 are pending in the instant application and have been examined.

Response to Arguments

2. Applicant's arguments, filed 1-27-06, with respect to claims 1, 3-11, 13-25, and 29-31 have been fully considered and, when taken together with the changes made to the language of the claims via the latest amendment, are persuasive in overcoming all the outstanding rejections of the claims as set forth in the previous Office Action.

Allowable Subject Matter

3. Claims 1, 3-11, 13-25, and 29-31 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The closest prior art in the field, Griffen US 5,893,077, McManis US 5,692,047, Chaplin US 5,315,655, and Fischer EPO 0 638 860 A2, Do not teach the features of the claimed invention as set forth in the independent claims:

As for claims 1, 11, and 22: Signing a live object where the signing includes the steps of instantiating a live object having at least one non-static field, in a runtime environment, taking a snapshot of the object by serializing a state of the object including information found in a non-static field of the object at the time of making the snapshot, and associating a signature with the object,

As for claim 29: Creating a signed object that represents a state of a live object instantiated in a runtime environment, where the live object contains dynamic data, including the steps of instantiating the object and thereby creating a snapshot array and a signature array associated with the object, storing a captured state of the live object in the snapshot array, generating a signature associated with the captured state, and storing the signature in the signature array,

As for claim 30: Creating a sealed object representing an encrypted version of a state of a live object containing dynamic data and instantiated in a runtime environment, including the steps of instantiating the sealed object and thereby creating a snapshot array, a signature array, and an encryption array associated with the sealed object, storing a captured state of the live object in the snapshot array, encrypting the snapshot and storing the encrypted version in the encryption array, and subsequently removing the snapshot from the snapshot array.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
